# Especificaciones de limpieza — Cleaning specifications

## NORMAS DE LIMPIEZA Y MANTENIMIENTO PORCELÁNICO

Limpeza final de obra: Después de la colocación es fundamental realizar una buena limpieza con el fin de eliminar residuos de junta y en general suciedad de la obra. Para esta operación recomendamos el empleo de un detergente de acción ligeramente ácida que no despidan humos tóxicos y respete las juntas, el material y el usuario, como FILA DETERDEK PRO. Es importante leer y seguir las instrucciones indicadas por el fabricante del producto, en este caso Fila.

En el caso de material colocado con junta epoxi o en base resina, se aconseja realizar la limpieza final de obra con un limpiador específico de residuos epoxídicos, como FILACR10.

Como normas generales deben tenerse en cuenta las siguientes precauciones:

- Realizar la limpieza ácida sobre pavimentos y revestimientos cerámicos cuando la junta ya haya secado (normalmente transcurridas 24 h del rejuntado.)
- Impregnar la superficie con agua limpia antes de realizar cualquier tratamiento.
- Seguir las indicaciones del fabricante de productos químicos.
- Evitar abrasivos, golpes, punzamientos que puedan rayar, romper o deteriorar la superficie del suelo.
- Evitar el contacto con productos que contengan ácidos fuertes como sulfamant, etc,...

Mantenimiento: Para un buen mantenimiento del pavimento se aconseja el empleo de un detergente neutro con alto poder limpiador como FILA CR10. En los casos de suciedad intensa e incrustada acumulada en el tiempo, se aconseja consultar el esquema a continuación para encontrar el producto Fila ideal para cada situación.

## CLEANING AND MAINTENANCE PORCELAIN

Cleaning after laying: We suggest a good initial cleaning after the laying on the floor or wall, this is very important for removing residual grouting and the normal dirt coming from the building works. We suggest the use of our product FILA DETERDEK PRO, that is a lightly acid product that doesn't emit fumes that are harmful for the user and that can attack joints. It is important to read and follow the instructions given by the product manufacturer, in this case Fila.

In case of material laid with epoxy or resinous grouting, we recommend to clean after laying with our specific detergent FILACR10.

As general rules, the following precautions should be taken into account:

- Carry out acid cleaning on ceramic floor and wall tiles when the joint has already dried (normally 24 hours after grouting) Impregnate the surface with clean water before carrying out any treatment.
- Follow the chemical manufacturer's instructions.
- Avoid abrasives, blows, punctures that may scratch, break or deteriorate the floor surface.
- Avoid contact with products containing strong acids such as sulfamant, etc.

Regular maintenance: For a good cleaning of the floor we suggest the use of our product FILA CR10 it's a natural detergent with a high cleaning power. In case of strong dirt and encrusted by the time, we recommend to consult the following scheme to find the perfect solution to every situation.

## PRODUCTOS / PRODUCT LIST

TIPO DE SUCIEDAD INCRUSTADA / TYPE OF DIRTY	PRODUCTO FILA A UTILIZAR / PRODUCT TO USE
